Hewlett-Packard Enterprise

To Whom It May Concern

It is with great enthusiasm that I recommend Allan Bolaños for academic and professional opportunities. As his professor at the Costa Rica Institute of Technology, I have had the privilege of teaching Allan in courses such as Computer Architecture and Computational Molecular Biology, where he consistently stood out for his analytical thinking, commitment, and ability to master complex concepts quickly.

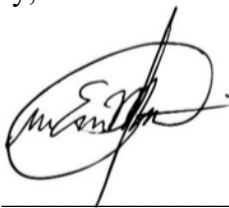

Beyond the classroom, Allan has been actively engaged in extracurricular and professional activities, notably through his involvement in IEEE. He has contributed to events and initiatives of the IEEE Engineering in Medicine and Biology Society (EMBS), the IEEE Computer Society (CS), as well as important international conferences in our country including CONESCAPAN and CONCAPAN. Additionally, Allan has collaborated with the IEEE International BioInspired Processing Conference (BIP) in Costa Rica, demonstrating leadership, teamwork, and a genuine interest in advancing science and technology in our community.

Allan distinguishes himself as an applied and outstanding student who combines strong technical knowledge with creativity, discipline, and initiative. His contributions in both academic and

extracurricular contexts reflect his capacity to balance rigorous coursework with meaningful engagement in international scientific and professional communities.

I am confident that Allan will bring the same level of excellence, commitment, and innovation to any program or position he pursues. Without hesitation, I strongly recommend him as a candidate who will add significant value to your organization.

Sincerely,
